1. Write a Python program that can do the following:

- You have $50
- You buy an item that is $15, that has a 3% tax
- Print how much money you have left, after purchasing the item. -

2. Ask the user how many days until their birthday

- Print an approx. number of weeks until their birthday
- 1 week is = to 7 days.

3. Create a variable "Grade" holding an integer between 0 to100. Code to print the letter grade of the number grade variable.

Grades:

- A = 90 - 100
- B = 80 - 89
- C = 70-79
- D = 60 - 69
- F = 0 – 59

4. Write a program in python to create a full calculator (Discussed in Class).
